

Spring Lawn Treatment

It is now time to **treat your grass** so that it can be the ravishingly lush lawn that you can revel (and roll) in throughout the SPRING and SUMMER season!

With our **easy-to-do spring treatment** and **list of products** needed you will be able to conduct your **pre-spring lawn treatment** with the sprightly energy that comes with that spring feeling that is slowly creeping in...

Spring Lawn Treatment

Replace lawnmower blades with new blades and set to **lowest height**. On Kikuyu and Cynodon lawns **cut the grass low to remove the thatch or mat layer**.

Berea/LM grass can be mowed about 2cm high.

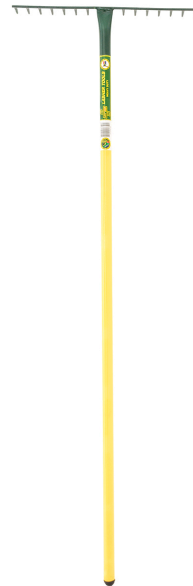

Rake vigorously across and down to **remove the old dead mat** using a steel rake with sharp teeth.

Water deeply to soften the soil.

Using a lawn spiker or garden fork **spike the soil** at least 20cm deep.

Water for about 3 mins before applying a **fertilizer**.

Water again after application.

(We recommend using a **3:2:1**, **7:1:3** or **5:1:5** fertiliser)

Allow to dry out and apply a **lawn dressing** of no more than 1-3cm thick.

Use a rake or hard broom to spread the lawn dressing across the lawn.

Use a flat side of a rake to level out the surface.

Apply water only when the **grass starts to grow through the lawn dressing**.

PLEASE NOTE: The above treatments are not suitable for cool season grasses like Kentucky blue, perennial rye grasses and blends (like ALL SEASONS EVERGREEN, SHADE OVER, PLAY MIX)

Your grass may not look so good after this treatment, but do not fear because soon after it will be ravishingly lush just in time for SPRING!
