3Sixty™

Formulated from resources in both science and nature 3Sixty premium organic Compost, Potting Mix, Lawn Dressing and much anticipated organic fertilizer NutriCAST™ with vermicast.

Premium Compost

We pride ourselves in the high nutritional value of our fully organic compost.

- High Nitrogen, Potassium and Phosphate levels in our 3Sixty compost as we select only the best organic materials to produce a quality product.
- Once 3Sixty compost is added to your garden soil the plant will have access to additional and readily available nutrients that are required for a healthy plant.

Premium Potting Mix

3Sixty premium organic potting mix is made from premium quality, renewable and sustainable resources. 3Sixty potting mix will maintain peak condition without compaction providing good structure and aeration for strong root growth ensuring your potted plants have the best possible growing environment.

KEY RANGE FEATURES:

- Continuous feeding for months
- Promote strong root and shoot development
- Suitable for specialty plants
- Improved moisture penetration & water retention

Premium Lawn Dressing

Your lawn is a little like a bear: it wakes up hungry in the spring. Take the right approach to fertilizing in spring, and you set your lawn up for a whole season of great growth. Fine sifted to provide your lawn with a "lift" of the correct N-P-K for the spring. 3Sixty lawn dressing takes care of undulation in the lawn and the compost acts as a booster for grass growth.

- High in nutritional value – Nitrogen, Phosphate, Potassium and Micro Nutrients.

NutriCAST™

Premium bio organic fertilizer

NutriCAST (biohumus) – is a natural organic fertilizer. It is a natural means for recultivation of the soil. #NutriCAST is capable of bringing back life to degraded ground and significantly increase fertility of soil. Research has shown that by incorporating Vermicast into soil or plant growth production it can significantly increase yields and has also shown disease suppressive qualities.

BENEFITS OF NutriCAST:

- High nutritional value.
- Has high water holding capacity
- Improves Cation Exchange Capacity (CEC)
- Beneficial effects on the physical chemical and biological characteristics of soil
- Addition of NutriCAST to soil improves the soil environment, encouraging the proliferation of roots, which in turn draw more water and nutrients from larger areas.
